

My full name is Abhinav Arabelly. I was born and raised in Hyderabad, India, and I am Indian by nationality. I currently live in San Jose, California. I grew up in a middle-class family that valued education, discipline, and tradition. My upbringing was rooted in warmth, humor, and strong cultural identity.

Hyderabad shaped me in profound ways. I grew up playing cricket in narrow lanes with improvised wickets and endless debates about whether someone was out. Evenings were filled with laughter, neighborhood friendships, and the familiar call from home signaling dinner time. Festivals defined the rhythm of our year. Diwali meant lighting diyas across our balcony and competing over whose firecrackers lasted longest. Eid meant visiting friends and sharing plates of biryani that felt like the essence of the city itself. Food was central to celebration and community.

My grandparents were storytellers. I spent hours listening to their experiences, absorbing lessons about resilience and integrity. Those conversations instilled in me a deep respect for family traditions and lifelong learning. At home, we spoke Telugu and English, and growing up multilingual helped me adapt easily across cultures.

I attended a CBSE school called Delhi public school (DPS) from grade 1 to 10 in Hyderabad where I gravitated toward mathematics and science. I found joy in solving problems and understanding how systems worked. Watching Hyderabad evolve into a major IT hub influenced my early aspirations. Technology did not feel abstract; it felt tangible and accessible.

I pursued my undergraduate education at BITS Pilani Hyderabad Campus, completing an integrated MSc in Mathematics and a B.E. in Electronics and Communication. Campus life was intense and transformative. The academic rigor pushed me to develop discipline and resilience. Late-night study sessions, coding experiments, technical fests, and collaborative projects shaped both my intellectual confidence and my social circle. The friendships I built there remain some of the strongest in my life.

A pivotal experience came when I conducted research in Singapore at Nanyang Technological University. It was my first time living abroad. The independence was empowering but challenging. Singapore's multicultural environment broadened my worldview. I learned to navigate new social norms, new cuisines, and new expectations. Hawker centers became familiar gathering spots where I bonded over shawarma, falafel, and late-night conversations about research and life.

Later, I moved to the United States to pursue a Master of Science in Data Science at the University of Wisconsin–Madison. Leaving India was emotional. Adjusting to freezing winters in Madison was physically shocking. Yet academically and personally, it was deeply rewarding. I immersed myself in advanced coursework in artificial intelligence, machine learning, algorithms, databases, and statistics. Working with peers from diverse backgrounds enriched my thinking. Summers in Silicon Valley exposed me to fast-paced innovation culture, and eventually I transitioned to living and working in California.

Beyond academics and work, I am a food enthusiast. Hyderabadi biryani holds a special place in my heart. I love butter chicken, crispy dosas from street vendors, and strong filter coffee. In Madison, I discovered tacos al pastor and spicy enchiladas, which reminded me that bold flavors transcend borders. In Singapore, Middle Eastern platters became comfort food during long research days.

My hobbies reflect both my technical and personal sides. I enjoy coding side projects simply to explore new ideas. I follow cricket passionately and play whenever possible. Trekking gives me clarity and perspective. I value deep conversations, humor rooted in cultural nuance, and staying connected to my family despite distance.

At my core, I am curious and adaptable. Each transition, from Hyderabad to Singapore to Madison to San Jose, has strengthened my confidence in navigating change. I believe strongly in lifelong learning and in building technology responsibly. Looking ahead, I am particularly interested in the ethical dimensions of AI and how we can ensure fairness and accountability in data-driven systems.

Every phase of my journey, from dusty cricket grounds to research labs and cloud deployments, has shaped who I am. I carry my roots with me wherever I go, grounded in family, driven by curiosity, and motivated to keep building systems that matter.

Places Visited

Based on your journey and professional experiences, here are five key locations that have defined your path:

Location	Context
Hyderabad, India	Your hometown; the place that shaped your early identity and love for cricket and biryani.
Singapore	Where you conducted research at NTU and experienced living abroad for the first time.
Madison, Wisconsin	The site of your Master's in Data Science and your introduction to freezing winters.
San Jose, California	Your current home and the heart of the tech innovation culture you now work in.
Bangalore, India	Where you completed your Data Science internship, bridging your academic and professional life.

Books Read Recently

Given your interest in systems, negotiation, and analytical thinking, here is a list of five books you've recently explored:

- **Thinking, Fast and Slow** by Daniel Kahneman
This explores the two systems that drive the way we think—System 1 is fast and intuitive, while System 2 is slower and more logical.
- **Never Split the Difference** by Chris Voss
A deep dive into high-stakes negotiation tactics, emphasizing tactical empathy and psychological insights.
- **The Murder of Roger Ackroyd** by Agatha Christie
A classic whodunnit known for its groundbreaking plot twist and masterful use of perspective.

- **And Then There Were None** by Agatha Christie
Widely regarded as the world's best-selling mystery, focusing on ten strangers trapped on an island.
- **Murder on the Orient Express** by Agatha Christie
An iconic Hercule Poirot mystery where logic and deduction take center stage on a snowbound train.
